

Radioecology and environmental radioactivity monitoring

Lecturers

Nicolas PAULY (Coordinator) and Geert BIERMANS

Course mnemonic

PHYS-H515

ECTS credits

2 credits

Language(s) of instruction

English

Course period

Second term

Course content

Notions of nuclear physics, effects of ionizing radiations on living being, atmospheric, aquatic, and terrestrial transfers of radioactive wastes, transfer in the food chain, modelling of these transfers, prevention and countermeasures (in the short-, medium- and long-term), sampling methods and measurement of external radiological exposure.

Objectives (and/or specific learning outcomes)

Notions essential for the understanding and for the modelling of the behaviour and of the transfer of radioactive waste in environment, of the effects of ionizing radiations on the living organisms and of the associated risks. Description of the methods of sampling, of measurement of the external radiological exposure and of the contamination in environment.

Teaching method and learning activities

Lectures + practical exercises
