

Spectroscopies moléculaires et spectrométrie de masse

Lecturers

Pierre VAN ANTWERPEN (Coordinator), Cédric Delporte and Michel LUHMER

Course mnemonic

CHIM-J202

ECTS credits

5 credits

Language(s) of instruction

French

Course period

Second term

Objectives (and/or specific learning outcomes)

The purpose of the course is to become familiar with spectroscopic and spectrometric methods. Theoretical but also practical aspects are emphasized to understand the potentiality of each analytical approach.

The course supports the seminar where students learn how interpreting spectra from proton & carbon NMR, IR and MS. Thanks to different provided spectra, the student should be able to identify or guess the structure of a simple organic molecule based on an analytical and logical thinking.

Pre-requisites and co-requisites

Pre-requisites courses

CHIM-J102 | Chimie organique | 5 crédits

Teaching method and learning activities

Lectures supported by slideshow and flash animations.
