

Informatique fondamentale

Lecturer

Emmanuel FILIOT (Coordinator)

Course mnemonic

INFO-F302

ECTS credits

5 credits

Language(s) of instruction

French

Course period

First term

Course content

- > propositional logic (syntax, semantics, tableau algorithm, natural deduction, resolution) -first order logic ((syntax, semantics, tableaux, natural deduction, resolution) -Goedel's completeness theorem -Goedel's incompleteness theorem

Objectives (and/or specific learning outcomes)

Give an overview of classical logics useful in computer science. Show the limits of what can be formalized using formal languages.

Pre-requisites and co-requisites

Co-requisites courses

MATH-F307 | Mathématiques discrètes | 5 crédits

Course having this one as co-requisit

INFO-F308 | Projets d'informatique 3 transdisciplinaire | 10 crédits

Teaching method and learning activities

Classical theory lectures with exercices. Realization of a small project where students have to solve a problem using a tool for solving satisfiability of propositional formulas (sat solver).

References, bibliography and recommended reading

- > Mathematical logic for computer science, Ben-Ari, Springer. - Slides given by the teacher

Evaluation method(s)

Oral examination

Evaluation method(s) (additional information)

Oral exam.

Programmes

Programmes proposing this course at the faculty of Sciences

BA-INFO | Bachelor in Computer science | unit 3 and BA-MATH | Bachelor in Mathematics | unit 3
