

Psycho-oncologie clinique

Lecturer

Isabelle MERCKAERT (Coordinator)

Course mnemonic

PSYC-E467

ECTS credits

5 credits

Language(s) of instruction

French

Course period

Second term

Campus

Solbosch

Course content

The course of clinical psycho-oncology will approach the issues that arise in the care of patients with cancer and their families via a biopsychosocial approach integrating psychoimmunological, psychoneuroendocrinological, psychodynamic, cognitive, behavioural, family and systemic approaches. It will focus on the psychological problems associated with the confrontation with cancerous illness both at the level of patients and their families (problems associated with the announcement phase, remission, relapse and end of life). It will develop the main psychological interventions implemented in this context (communication, preparation, support, psychotherapy).

Objectives (and/or specific learning outcomes)

The aim of this course is to introduce students to the conceptual bases, the diagnostic examination and the clinical management of patients and families in oncology. It also aims to introduce students to psychological interventions for patients, families and health care teams in psycho-oncology.

Teaching method and learning activities

Theoretical course. The course will be given on-site. The students will have at their disposal the slides of the course in pdf format. The course will be recorded and available for streaming via UV.

Contribution to the teaching profile

The aim of this course is to enable the student to situate the concrete issues in the field of psycho-oncology. It will aim to make

the student aware of the conceptual bases, approaches, methods and tools for analysis and intervention that can be used in the field of psycho-oncology. It will enable the student to distinguish the levels of analysis (e.g. biological, developmental, psychosocial, interindividual, etc.).
