Contenu du cours

Introduction: urban sustainability challenges and circular economy perspectives

Sustainable urbanism: socio-economic, environmental and political dimensions of urbanism

Sustainable circular economy: concepts and approaches

Urban sustainability assessment: concepts and approaches

Metabolism of urban systems – I

Metabolism of urban systems – II

Urban ecosystem services – I

Urban ecosystem services – II

Sustainable urbanism: Micro-scale case studies and best practices

Sustainable urbanism: Macro-scale case studies and best practices

Urban sustainability design, planning, and policy development

Objectifs (et/ou acquis d'apprentissages spécifiques)

This module aims at analysing and assessing the sustainability of urban systems with an emphasis on circular economy perspectives and sustainable urbanism approaches.

By the end of the module, the student should be able to:

- ¹ understand the functioning of urban systems at different scale levels
- ² analyse the interaction between urban systems and resource flows
- ³ analyse and assess the sustainability of urban systems using state-of-the-art methods, indexes and tools

⁴ assess the different initiatives and plans aimed at sustainable urban development

⁵ develop strategies and solutions to improve the urban sustainability in terms of urban design, spatial planning and policy

⁶ present the analysis and assessment of urban sustainability in the form of a scientific paper

Méthodes d'enseignement et activités d'apprentissages

24h lectures: organized to cover the different concepts and methods, including invited guest lectures from practitioners.

12h tutorials: urban sustainability assessment methods and tools application in case studies.

12h case study analysis: students work in groups on a selected case (city, urban area) approved by the coordinator. They will collect data, followed by analysis and assessment with the tools learned during the module.

12h personal work in groups dedicated to the final report in the form of a scientific paper.

Contribution au profil d'enseignement

Advanced Masters in Transition Urbanism / Sustainable Urban Design & Regional Planning; and MSc in Urban Studies, and contribution towards: understanding, analysing and assessing the sustainability of urban systems with an emphasis on circular economy perspectives and sustainable urbanism approaches.

Méthode(s) d'évaluation

Autre, Travail de groupe et Rapport écrit

Méthode(s) d'évaluation (complément)

The students will work in groups and produce:

- > A case study analysis assignment during the tutorials using urban sustainability assessment methods and tools (3).
- > A final report in the form of a scientific paper (6) describing the selected case study (a city or an urban area) as an urban

system (1), analysing the interaction between the urban system and resource flows (2), assessing the functioning of the urban system at different scale levels in terms of sustainability (1, 3), analysing the recent progress made towards sustainability (4), and proposing strategies and solutions to improve the sustainability (5)

Construction de la note (en ce compris, la pondération des notes partielles)

30% case study assignment

70% final report in the form of a scientific paper

Langue(s) d'évaluation principale(s)

Anglais

Programmes

Programmes proposant ce cours à l'école polytechnique de Bruxelles

MS-URDE | Master de spécialisation en urbanisme et aménagement du territoire | bloc U

Programmes proposant ce cours à la faculté d'Architecture La Cambre Horta

MS-URDE | Master de spécialisation en urbanisme et aménagement du territoire | bloc U

Programmes proposant ce cours à la faculté des Sciences

MA-GEOG | Master en sciences géographiques, orientation générale | finalité Urban studies/bloc 1 et finalité Urban studies/bloc 2
