Erasme

Programme's added value

- > Training with a particular focus on practice;
- > Wide range of hospitals in Brussels and Wallonia;
- > Possibility of work placements/internships (clinical or research) abroad, either in Europe or on one of the four other continents;
- > Opportunity to spend a year abroad at a European partner university (Erasmus exchange programme) with recognition of credits and grades;
- > Multidisciplinary campus including – among others - the Faculty of Medicine, the School of Public Health, the Institute of Human Movement Science and Library of Health Sciences and of course the Erasmus Teaching Hospital.

Succeed in your studies

Choose

The information and guidance counsellors at the InfOR-études [<https://www.ulb.be/en/studies-info-desk-1>] service will help you choose your studies throughout the year.

Succeed

Take part in preparatory courses [<https://www.ulb.be/en/studies-info-desk-1>] or get help to succeed [<https://www.ulb.be/en/studies-info-desk-1>], before or during your studies.

Get help

Apply for financial aid, look for accommodation or a student job, get support [<https://www.ulb.be/fr/aides-services-et-accompagnement/aid-services-and-support-1>] for your specific needs.

Programme objectives

The major aim of the ULB's Master in Medicine is to provide scientific and professional training in order to produce highly skilled doctors with a sense of integrity and a profound understanding of human considerations. Students learn about their future career through contact with experienced practitioners right from the outset. The course gives successful graduates legally recognised access to the profession and provides them with the necessary skills to allow them to seek work in a broad range of fields, such as :

- > Curative and preventive medicine
- > Hospital and clinical practice
- > Workplace and school medicine
- > Laboratory and industry research

The training takes into account the scientific, human and societal considerations of the medical profession, such as :

- > Scientific approach to medical problems based on the principles of evidence-based medicine
- > Techniques for communicating with patients and their families which respect the needs of the patient particularly in terms of decision-taking
- > Respect for legal and deontological rules, and ethical principles, etc.
- > The need to keep continuous training and constant updating of skills
