ecology & public space, sustainable transport & urban mobility, transition planning & territorial development, etc.)

- Strong research by design orientation – value of the programme as fertile grounds for prospective and research by design PhDs
- Internship : compulsory internship (research lab or professional office)
- Language of instruction: French and English. This choice has been made to simultaneously cover the local needs for highly trained people in urbanism and increase the international attractiveness of the programme using Brussels, European Capital, as an asset.

Teaching methods

The programme will use a mix of different education methods : planning and design training in the studio, lectures seminars and individual work in the core module.

International/Openness

In the framework of this programme, students will have the opportunity to realize an erasmus placement internship in a urbanism agency or research center. International collaborations with partner universities will be organized in the design studio. Students will be offered the opportunity to take part in international masterclasses.

Job opportunities

Urbanist, urban designer, town planner, researcher - independent practice or public servant

Programme objectives

This Advanced Master aims at training highly qualified professional and researcher to become cutting edge planner and urbanist. The need for such profile is not covered by any existing master at ULB, the Master in Urban Studies (VUB-ULB) and the master in urban management of ULB in Châleroi. On the contrary, there is a strong need for such a programme to deepen the urbanism and research by design skills of master graduates with an initial training in architecture (MA Architecture, MA landscape architecture, MSc Architectural Engineering). The current proposal is an attempt to deliver collaboratively a revised and upgraded Advanced Master in Transition Urbanism.

Programme's added value

- Planning and design strategies as a cornerstone - with particular focus on linking research by design for strategic spatial planning with public policy
- Focus on sustainability and transition - climate and economic change, territorial ecosystem & urban metabolism, landscape
