

# Master of Science in Chemical and Materials Engineering

## Focus Professional

The main training focuses in Chemistry and Materials Science are :

- > Synthesis and characterization of chemical and material compounds
- > Study of the structure-properties relationship of molecules and materials
- > Instrumentation, modeling and (bio)process design
- > Fluid dynamics, transport phenomena and industrial processes
- > Recycling, environment and pollution control
- > Introduction to the safety of industrial installations and to the biotechnologies

The Master program (120 ECTS - 2 years) is characterized by a broad common core (56 ECTS spread over the two years) covering different fields of chemical and materials engineering, including the materials fundamental properties and environmental technologies.

Two options are available (30 ECTS spread over the two years):

- > **Process Technology** : to gain expertise in process control, from the development and use of modeling tools to process implementation.
- > **Materials Science** : advanced teaching on multiple aspects from design and synthesis of products and materials to their elaboration and the study of their properties.

Students will complete their programme either with an internship and/or with optional learning units for at least 10 ECTS. If they wish, they can also follow an Entrepreneurship module.

Finally, a master's thesis dissertation (24 ECTS) needs to be carried out in one of the laboratories, and can be in collaboration with an industry, a research center or a cooperation unit.
